

## NARRATIVE

Vehicle 1 was in lane 1 of 2 on SB SR 305 in a ferry only lane that directs vehicles straight. Vehicle 2 was in lane 2 of 2 which is a lane for going left or right or straight for local traffic but is NOT a ferry line.

Vehicle 1's driver stated he got a yellow light and had to stop quickly and stopped in the marked area of no stopping. The subject then stated he thought he saw the light turn green and began to go forward and Veh 2 also had a green light to turn right and the vehicles collided in the intersection as vehicle 2 turned onto Winslow way.

The traffic lights at this intersection is new and the ferry line light is smaller than the other lights for Lane 2's traffic. the lights do not turn green at the same time. i believe the subject saw the other lights turn green and thought they were his due to the new light pattern which caused the collision.
